ORANGE®

ANNUALS

2023 - 2024

GROWING TOGETHER

Dümmen Orange's approach to sustainability is set out to deliver strong performance, sustainable growth and leading together with our industry partners towards a greener, more beautiful world.

We have strong ambitions and clear goals to minimize our environmental footprint, support the well-being of our people and the communities in which we operate, and invest in research and technology that supports sustainable floriculture across the value chain.

As an innovative breeder, we prioritize developing and commercializing disease resistant genetics, producing more resilient flowers and plants, enabling growers to reduce agrochemical use and become more sustainable.

Naturally, we monitor our own business operations and ensure that they are conducted in an eco-friendly and humane manner.

EN The Solution

Resistant plant sources are identified by inoculating breeding material with the virus and testing the level of resistance under controlled conditions favorable for TMV development. Resistant plants identified through this method are then used as starting material in the breeding process.

DE Die Lösung

Resistente Pflanzenquellen werden identifiziert, indem das Züchtungsmaterial mit dem Virus infiziert und der Grad der Resistenz unter kontrollierten, für die TMV Entwicklung günstigen Bedingungen getestet wird. Mit Hilfe dieser Methode können resistente Pflanzen erkannt und als Ausgangsmaterial für den Züchtungsprozess verwendet werden.

NL De oplossing

Resistentie in planten kan worden geïdentificeerd door plantmateriaal te inoculeren (inenten) met het virus en vervolgens het resistentieniveau te testen onder gecontroleerde omstandigheden die gunstig zijn voor de ontwikkeling van TMV. Met de resistente planten die op deze wijze zijn geïdentificeerd, wordt uiteindelijk verder veredeld.

FR La solution

Les sources végétales résistantes sont identifiées en inoculant le virus au matériel d'hybridation et en testant le niveau de résistance, dans des conditions contrôlées favorables au développement du TMV. Les plantes résistantes identifiées grâce à cette méthode

sont ensuite utilisées comme matériel de base pour le processus d'hybridation.

IT La soluzione

Le fonti vegetali resistenti vengono identificate inoculando con il virus il materiale per l'ibridazione e testando il livello di resistenza in condizioni controllate che favoriscono lo sviluppo del TMV. Le piante resistenti individuate con questo metodo sono poi utilizzate come materiale di partenza nel processo di ibridazione.

ES La solución

Las fuentes vegetales resistentes se descubren inoculando el virus en el material de hibridación y haciendo pruebas del nivel de resistencia en condiciones controladas que favorecen el desarrollo del TMV. Las plantas resistentes descubiertas con este método se utilizan luego como material de partida en el proceso de hibridación.
